

AVIATION MANAGEMENT

Why choose Commercial Aviation Management at Western?

Choose CAM and you will start a career path that offers excellent employment opportunities and satisfies your passion for flight. But CAM is not only for aspiring professional pilots. The aviation industry offers a broad range of careers for which the CAM degree, especially in combination with commercial pilot qualification, provides the foundation for lifelong success and satisfaction.

Our graduates have established a reputation as solid professionals. They have gone on to become airline pilots, military pilots, Transport Canada and Transportation Safety Board specialists, air traffic controllers, educators, business leaders in aviation companies, aviation entrepreneurs and much more. There is no limit to what you can achieve.

As a pilot you are in control and responsible for the safe conclusion of each flight. The discipline, the judgment, the restraint and skills that pilot trainees acquire transfer to all aspects of life. Pilots enjoy special status in our society and many successful and influential people are pilots.

CAM is a challenging program with a full course load in addition to the flight training option. It isn't for everyone, but if you are up to the challenge, we're ready to reward you with the highest quality training and education available in this field.

CAM is a four-year program leading to a Bachelor of Management and Organizational Studies degree with specialized courses in aviation management. Students can complete the BMOS degree with either an Honors Specialization, Honors Double Major, or Specialization designation.

Western 
UNIVERSITY • CANADA

Flight Training

Diamond Flight Centre London Inc. is Western's exclusive flight training provider. Our focus is safety, quality instruction and your satisfaction.

DFC London's location at the London International Airport provides an ideal training environment with commercial air traffic, instrument landing systems and tower air traffic control, balanced by quiet rural training areas.

Our large fleet of modern, advanced technology aircraft, featuring glass cockpits, modern powerplants and state of the art carbon composite airframes, are complemented by a fleet of desktop trainers, simulators and other training aids.

At DFC London, you will not only become a pilot and achieve your ratings, you will learn the professional skills and attitudes that will give you an edge as you proceed with your flying career.

Our senior staff members are career pilots and instructors with extensive commercial and military experience.

The CAM flight training program includes over 400 hours of pilot ground school and approximately 300 hours of flight instruction, about one third in simulation devices and two-thirds in actual aircraft.

Subject to successful completion and testing you will graduate with a Commercial Pilot Licence with Multi-Engine Class Rating and Instrument Rating (Multi-Engine Group 1).
